The HTML Playbook

Tagged-export workflow prototype

By Odejobi Abiola Samuel / CTROTECH

This four-page experiment tests semantic export features. It is not the release PDF and is not claimed to conform to PDF/UA or WCAG.

- Heading hierarchy and paragraphs
- Selectable coloured code
- A linked source and a structured table
- Language metadata and attached third-party notices

AI-assisted editorial preparation. Author credit does not imply an exclusively human-written manuscript.

01. What HTML does

The main element identifies the page's dominant content. The h1 names it. The anchor is a real hyperlink because it has an href. These choices remain useful without a framework, a stylesheet or a pointer device.

```
<main>
  <h1>Neighbourhood Library</h1>
  <p>Borrow books and find a quiet place to read.</p>
  <a href="catalogue.html">Browse the catalogue</a>
</main>
```

Check your understanding

Which part of this example belongs to HTML, and which change would require CSS: renaming the heading, changing its colour, or changing the link destination?

The heading text and href are document content, so both are HTML changes. Colour is a presentation decision for CSS. JavaScript is unnecessary for any of these edits.

Read the chapter source

09. Text, encoding and escaping

The code element supplies semantics for a code fragment; escaping stops the fragment from being parsed as an actual element. Both decisions matter.

```
<p>Write <code>&lt;button&gt;</code> for an action.</p>
<p>Research &amp; reading</p>
<p title="She said &quot;welcome&quot;">A quoted greeting</p>
```

Check your understanding

How would you show the literal source text Hello inside a code element?

Use <code><p>Hello</p></code> in the HTML source. The browser displays the tag spelling as text. Keep the code element so that the kind of text is still identified.

Table and navigation fixture

Publication example types

Example	Purpose
Chapter 01	Document meaning and navigation
Chapter 09	Literal source text and character references

What remains unverified

Tag presence alone does not prove correct reading order, code pronunciation, table-header associations or keyboard behavior in a PDF reader. A full-book export, a PDF/UA validator and assistive-technology checks are still required.
